Abstract:

Darwin 101 (Enhanced): From Earth to Space

Charles Darwin was a modest man, yet one of the great revolutionaries of intellectual history. Born into a culture wedded to Genesis, he brought biology into the realm of natural world. The implications range from of the "why" questions of biology, to our view societies to our ability to combat AIDS. In our era of genomics and space exploration, these insights are being applied to the age-old question: are we alone?

Key Words:

Combat

Space Exploration
